RF Relocate Qty

Description

The RF Relocate Qty program is a "limited" relocation program for relocating non-serialised products only. For a more general relocation program that can also handle serialised products, see the RF Relocate1 or RF Relocate2 programs.

Note that the RF Relocate Qty program was developed before the RF Relocate1 program. All the functionality of the RF Relocate Qty program was incorporated into the later RF Relocate1 program.

"Main" tab page

On the "Main" page, users must first specify the:

- Source Pallet number
- Destination Pallet number

After these 2 pallet numbers have been specified, users can then perform the qty relocation from the "Source" tab page.

There are 3 ways to select the pallet number:

- [Pallet] button

- [Find by Location] button
- [Find by Item] button

[Pallet] button

This option will display a list of existing pallet numbers in the warehouse. Click on a pallet number from the grid and click the **[Select]** button to select it.

Once a pallet has been selected, click the [Select] button to return to the RF Relocate Qty program.

Transaction

Once the pallet numbers have been loaded into the "Main" tab page, the "Source" tab will show the contents from the Source Pallet, while the "Dest" tab page will show the contents on the Destination Pallet.

The total qty of the item selected will be populated into the textbox next to the [Move to Dest Pallet] button. If you only want to relocate a partial qty to the destination pallet, change the textbox to the qty to be actually relocated. Then click the [Move to Dest Pallet] button.

The "Source" and "Dest" tab pages will be changed to reflect the relocation transaction.
